**DETAILED ACTION**

**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kurt M. Pankratz (Reg. No. 46,977) on April 30, 2004.

The application has been amended as indicated in the facsimile transmission attached hereto (see MPEP § 1302.04).

***Allowable Subject Matter***

Claims 1-52 are allowed.

***Examiner's Reasons for Indicating Allowable Subject Matter***

The independent claims are directed to a system for controlling an audio conference. An audio conference is established between a plurality of devices coupled to a packet network. A plurality of selectively mixed signals is communicated to a conference administrator device for monitoring, where each selectively mixed signal includes media from at least two of the devices and excluding media from at least one of the devices. A command is received from the

Art Unit: 2645

conference administrator device to disable media from a particular device. The media from the particular device is disabled in order to terminate communication of the media from the particular device to the other devices in the audio conference. The media is also communicated in packets.

Certain limitations expressly limit the scope of the claims. For example, the audio conference is established between a plurality of device coupled to a packet network wherein the media is communicated in packets. Further, a plurality of selectively mixed signals is communicated to the conference administrator device for monitoring. Communicating selectively mixed signals from each device to the administrator distinguishes over communicating a single source signal from each device (see page 11 of the applicant's specification). Further, the claims require that each selectively mixed signal includes media from at least two of the devices and excluding media from at least one of the devices.

The features discussed above allow the administrator device to select the mixed signal in a sequence that effectively terminates the communication of undesirable media (e.g., see page 11, lines 1-10 of the applicant's specification).

The closest prior art of record is U.S. Patent No. 6,597,667 B1 to Cerna (hereinafter "Cerna"), as applied in the last Office action. Cerna fails to disclose communicating a plurality of selectively mixed signals to the conference administrator device for monitoring, each

Art Unit: 2645

selectively mixed signals including media from at least two of the devices and excluding media from at least one of the devices.

The remaining prior art of record fails to teach or fairly suggest the obviousness of substantially modifying Cerna in order to arrive at the invention as claimed in detail by the applicant.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
